

# **TOURIST PACKAGES**

*Hello peers, my idea for building a project using node.js is  
A TOURIST PACKAGE website .*

## **Goals :-**

*This website will assist the people to explore various tourist places to visit all around the globe and will help them choose the best package suiting their requirements and expectations.*

## **Benefits:-**

*People will know the places to visit sitting on their couch , they will get to know the prices of packages, ratings based on previous customers ,and much more.*

## **Features:-**

- User friendly UI*
- Facility to chat online*

- All the details of the packages
- Online payment gateway ,etc

### **Survey:-**

There are many websites already working in this area such as Make my trip,Booking.com,Trip Advisor.com,airbnb.com,eastday.com , etc.

Most of these websites are based on traditional backends like php which uses mysql , but this website would work on nodejs which is more protected and reliable than php.

### **External Links:-**

booking.com

tripadvisor.com
